The story of public power in the Northwest is an engrossing epic of compelling leaders who shaped the very development of our region. This striking blend of people, politics, and geography transformed electricity from a scarce and expensive luxury to being the most omnipresent service powering the devices that run our modern lives.

This 2016 edition of Public Power Chronicle is presented as an important learning and reference tool for anyone interested in energy in the Northwest region. This is a guidebook that strives to shed light on the fundamentals of a complex corner of the electricity industry unique to the consumer-owned utilities in the Northwest. Here you will find a basic primer about the system that generates and delivers wholesale electricity, as well as background and history around the leaders and vision that brought light, jobs, and quality of life to our region.
PUBLIC POWER
CHRONICLE
A Guide to Public Power in the Pacific Northwest for the Twenty-first Century

Public Power Council
PART 1 THE ROOTS OF NORTHWEST PUBLIC POWER 1

CHAPTER 1 DEDICATED TO OUR COMMUNITIES 3
What Is Preference?
The “Public” in Public Power
Types of Utilities on the Public Power Roster
The Bonneville Power Administration

CHAPTER 2 PEOPLE AND EVENTS THAT SHAPED PUBLIC POWER 15
Public Power Takes Hold
Lighting the Cities
Public Power on the National Stage
Reclamation and the Birth of Grand Coulee Dam
Formation of Northwest Public or People’s Utility Districts (PUDs)
Congress Creates the Bonneville Power Administration (BPA)
Supply Questions and the Washington Public Power Supply System
Looming Shortage and “Net Billing”
The Hydro-Thermal Program and Its Collapse
Bond Default and Terminations
Northwest Power Act Signals New Era
Deregulation and Salmon Shake Up the 1990s
Comprehensive Review of a Changing System
Unintended Consequences of Deregulation

CHAPTER 3 MEETING NEW CHALLENGES IN THE TWENTY-FIRST CENTURY 37
The West Coast Energy Crisis
Setting a New Course — A Regional Dialogue
Conflicts over the Residential Exchange
The Diminishing Direct Service Industries (DSIs)
Reaping the Wind
Focus Shifts to Transmission
The Job Is Never Done — Investing in the Future
CHAPTER 4  THE SOURCING, PLANNING, AND SALE OF ELECTRICITY  53
Harnessing the Flow of the Columbia and Tributaries
The Burdens Placed on the Hydro System
The Two Major Agreements That Guide Hydro Operations
Resource Planning and Acquisitions
PNUCC’s Northwest Regional Forecast
The NWPPC’s Twenty-Year Plan for the Northwest
BPA Projects the Need for More Capacity
The Process Called “Integrated Resource Planning”
Wheeling and Dealing in Today’s Power Markets
Leading the Way in Energy Efficiency
How Generators Get Built

CHAPTER 5  MOVING POWER TO PEOPLE: THE TRANSMISSION GRID  73
A Profile of the Transmission Grid
The Ties That Bind: Interties Connect the Grid, North and South
Basic Transmission Operations and Balancing Areas
Open Access to Transmission
Regional Transmission Organizations (RTOs) and Transmission Coordination
Transmission Planning
Organizations Dedicated to Ensuring Reliability
Transmission Products Tailored to Need
Integrating Variable Generation
Meeting New Challenges to the Transmission System

CHAPTER 6  DOING BUSINESS: CONTRACTS AND RATES  91
Customers Offered a “Slice of the System”
Regional Dialogue Contracts and Tiered Rates
Determining a “High Water Mark”
The Art of Ratemaking
The Costs That Drive Rates
The Three-Step Rate Process
Some Ways Power is Priced
A Closer Look at BPA Ratemaking
CHAPTER 6  DOING BUSINESS: CONTRACTS AND RATES (Continued)  102
How BPA Gathers Data to Support Its Rates
BPA Revenue Requirement: Where the Money Goes
One Layer Deeper on BPA’s Wholesale Rates
DSI Rates
The 7(b)(2) Rate Test
Transmission Rates

CHAPTER 7  FISH AND WILDLIFE: THE HYDROPOWER CONNECTION  107
The Cost of Fish Programs
Status of Columbia River Salmon Species
The Laws Applying to Salmon Recovery
The Four H’s: Habitat, Hatcheries, Harvest, and Hydro
Biological Opinions: A Long and Litigious History
The Federal Caucus and Its “All-H” Paper
The Columbia Basin Fish Accords
The Court Critiques the Biological Opinion (BiOp) Again
Getting Smart About Spill
Costs of Fish Measures Reflect Their High Priority
Hatcheries Mitigate for Impacts to Salmon
Dam Breaching Proposals
Sound Science Should Guide Fish Measures

APPENDICES  129
Appendix A: Timeline of Northwest Public Power Milestones
Appendix B: Glossary of Northwest Electric Industry Terms
Appendix C: Organizations Involved in Northwest Electric Power Issues
Appendix D: Relevant Federal Laws, Treaties, and Court Decisions
Appendix E: Table 1 – Federal Columbia River Power System Hydro Projects
   Table 2 – Thermal and Nonfederal Hydro Projects
Appendix F: Northwest Consumer-Owned Electric Utilities

INDEX  169
The story of public power in the Northwest is an engaging epic of compelling leaders who shaped the very development of our region. This striking blend of people, politics, and geography transformed electricity from a scarce and expensive luxury to being the most omnipresent service powering the devices that run our modern lives.

This 2016 edition of Public Power Chronicle is presented as an important learning and reference tool for anyone interested in energy in the Northwest region. This volume does not attempt to provide a full history of Northwest energy policy. Nor does it attempt to capture all of the evolving technological and utility trends that are changing our industry every day. Rather, this is a guidebook that strives to shed light on the fundamentals of a complex corner of the electricity industry unique to the consumer-owned utilities in the Northwest. Here you will find not only a basic primer about the system that generates and delivers wholesale electricity, but also some background and history around the leaders and vision that brought light, jobs, and quality of life to our region.

Our recognition of those who helped create and support this publication starts with all of the Public Power Council’s (PPC’s) members who make up the current leaders of the consumer-owned utilities that created this story. In addition, we thank our PPC Executive Committee of utility leaders who oversee our work.

We would like to give a special thanks to Ed Mosey and Sonya Bruce, two talented and dedicated writers and researchers who doggedly took on the mission of writing new sections of this edition, and updating sections from prior editions. And, our sincere thanks also to Audrey Paice on the PPC staff, who took on the role of project organizer in addition to all of her other day-to-day duties in the office. Other expert PPC staffers who were instrumental in writing, editing, and creating graphics include Nancy Baker, Michael Deen, Bo Downen, Kathy Jones, Kevin O’Meara, Irene Scruggs, and Chris Weber.
PPC has always had top notch consultants who advise us on a variety of subjects. **Nicole Case** was instrumental in helping us on several parts of this project, and **Marty Kanner** and **Shane Scott** provided important support as well.

We appreciate the indispensable assistance of several other writers and reviewers for this publication. They include PPC Executive Committee Member, **Dan Peterson**, former PPC Manager, **Jerry Leone**, former PPC staffer and long-time regional energy expert, **Geoff Carr**, and power supply expert, **Humaira Falkenberg**.

Just as our current public power leaders stand on the shoulders of their predecessors, this new edition of the Public Power Chronicle relies heavily upon great work done in the past. We give our thanks to **Ben Tansey**, who was the lead writer on the prior edition and collected some of the initial work for the current edition. We would also like to express our deep gratitude to the staff of the **Bonneville Power Administration**, especially **Tina Kay** with the BPA Library Staff and **Joel Scruggs** with the BPA Public Affairs Staff.

Finally, we would like to give a heartfelt thanks to the excellent staff at BookWise Design who brought tremendous expertise to this project. In particular, **Shannon Bodie** provided essential guidance to us over many months, and skillfully designed and edited the publication before you, and **Palma Odano** provided quick and insightful proofreading.

There are many emerging issues, processes, successes and failures that could be included in a work such as this. Even as we go to print, new chapters are being written as fresh challenges arise in our dynamic industry. It is our hope to start in the not too distant future on the next edition so that we may continue to chronicle the incredible journey of public power in the Northwest.

**R. Scott Corwin**

Editor
Executive Director
Public Power Council
